NOTES

WARNING! Read carefully the notes on the back of the order form. By filling the order form you acknowledge to have read, understood, and accepted the instructions and limitations

Please read carefully and follow the guidelines indicated here.
This will help us in serve you better to deliver exactly what you expect.

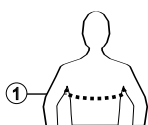

Colors

While we put good care in verifying fabrics, please understand that colors may vary depending on the type of fabric, and on the same type of fabric depending on the dyeing lot. This is particular important if you decide to order your jumpsuit in a single color: as different fabrics are used on the jumpsuit we cannot warranty that the shades of colors will be the same on all the parts of the jumpsuit.

Remember to check with your dealer the availability of colors when placing your order to avoid delays. Include an e-mail address when possible so you can be contacted to clear problems with your order.

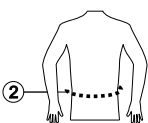

How to take measurements

Take measurements on light clothes, with shoes you generally use to jump, remove objects from pockets, and have someone taking measurements to you, so you can be standing straight while measured: follow the indications on the drawings. If you usually jump with heavy clothes, please let us know. Do not add extra centimetres to the measurements. Take extra care in measuring #4 and #5, as almost no alteration can be done on these measurements in case the jumpsuit won't fit. Take your measurements three times or more to be absolutely sure about the numbers you're providing on the order form. The computer assisted manufacturing system and laser cutting machine are programmed to allow some tolerance on measurements, but not too wide. We can only warranty the manufacturing according to the measurements we receive: if they're wrong the jumpsuit may not fit or not perform as expected.

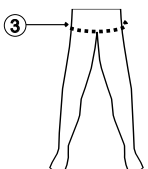

1 - Chest

Must be taken while standing up, at the height of the armpits, arms down. Women should take this measurement at the breast, as female cut is different from male cut. Women with smaller chest measurements may consider to order the male cut, as extra fabric added to the female design may not fit tight. In this case just specify M for male on the order form.

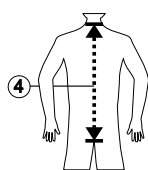

2 - Waist

Take this measurement at navel level.

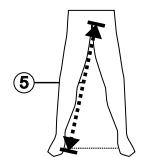

3 - Hips

To be taken at the widest part of the hips.

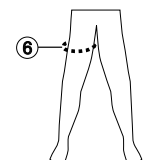

4 - Notch to crotch

Have this measurement carefully taken, from the small hole at the base of the neck down to the crotch. Have someone take this measurement on you, while you're standing straight. The jumpsuit design takes into account tolerances to allow freedom of movement in freefall, especially when arching. Therefore while wearing your jumpsuit on the ground you may notice a little baggy fit in length, and this is normal. This measurement has to be taken very carefully as any modification on the jumpsuit after it has been built is not possible because of its construction.

5 - Inseam

This must be carefully measured along the leg, from the crotch down to the ground, with shoes you generally use to jump. Put extra care in this measurement, especially if you're ordering the bootie or the Total Blast option. The jumpsuit design takes into account tolerances to allow movement of the leg when using the bootie, so you may notice a little baggy fit of the leg length while wearing your jumpsuit on the ground: this is normal. This measurement too has to be taken very carefully as any modification on the jumpsuit after it has been built is not possible because of its construction.

6 - Thigh

Measure the thigh at the height of the crotch, as indicated in the picture.
